
Root probe at launch
no root
root
Root-free path: VpnService, zdtun relay, bounded queue; knows the owning app
Rooted path: helper through su, AF_PACKET; sees inbound and link layer
Canonical packet record
one builder, no capture-mode branches above it, owning app if known
Protocol dissection, JA3 and JA4
pcapng export
Flutter UI bounded, best-effort
L1 statistical per app
L2 signatures 18 entries
L3 rule engine per-app windows
L4 flow and app detectors
